**DETAILED ACTION**

***Response to Amendment***

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Zadno-Azizi et al. (6,022,336). See column 22, lines 1-46. Zadno-Azizi discloses a method of treatment of a blood vessel comprising advancing an evacuation sheath assembly (410) into the blood vessel, stopping normal antegrade blood flow in the blood vessel proximate the stenosis, advancing a therapeutic catheter (420) into the blood vessel, treating the stenosis with the therapeutic catheter and removing the therapeutic catheter (see column 22, lines 5-10), advancing an infusion catheter (not shown) to a location distal to the stenosis after removing the therapeutic catheter, infusing the blood vessel with a fluid supplied by the infusion catheter, and inducing retrograde flow within the blood vessel to carry the infused fluid and embolic material dislodged during treating into the evacuation sheath assembly, wherein advancing the infusion catheter includes advancing the infusion catheter through a distal end of the evacuation sheath assembly, wherein stopping blood flow includes creating a first seal (412) between the evacuation sheath and the blood vessel and creating a second seal between a guide catheter and a proximal portion of the evacuation sheath assembly, wherein the retrograde flow

Art Unit: 3763

includes applying a vacuum through the evacuation sheath, treating the stenosis includes advancing an angioplasty balloon (426), wherein treating the stenosis includes advancing a stent to the stenosis, and wherein inducing retrograde flow involves venting pressure as is well-known in the art, wherein the blood vessel can be a coronary artery or saphenous vein graft, wherein the step of stopping normal antegrade blood flow is performed prior to advancing the device across the stenosis, wherein infusing the blood vessel is done through infusion port, and wherein saline, blood, or radiopaque dye can be infused into the blood vessel, wherein the evacuation sheath is advanced through guide catheter and further applying a vacuum to the guide catheter and further comprising inducing retrograde flow prior to advancing the infusion catheter to move debris proximal to the treated stenosis.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-19 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Theodore J. Stigell whose telephone number is 571-272-8759. The examiner can normally be reached on M-F 8:30-5:00.
